

Competition 02 — Vibe & Pitch

Overview

Vibe & Pitch is Spectrum 26's product competition. You identify a real problem, build a working product using any tools you want — AI, no-code, full-stack, whatever gets it shipped — then submit your work for screening on Day 1. A select number of finalists are invited to pitch in front of an industry judge panel on Day 2. The module management reserves the right to determine how many teams qualify, and not all submissions will make the cut.

The judging is entirely product and business focused. How you built it is irrelevant. What you built, who it is for, and whether it makes sense as a real product — that is everything.

Participation format: Solo, Duo, or Triplet

Venue: DHA Suffa University

Duration: 2-Day Event (June 8 and 9, 2026)

Tools: All AI tools, no-code platforms, vibe coding IDEs, automation tools, and frameworks are permitted. Build with whatever works.

Registration Fees

Solo — Rs. 500

Duo — Rs. 1,000

Triplet — Rs. 1,500

Timeline and Format

Pre-event — Challenge Verticals Announced

A set of challenge verticals will be announced a few days before June 8 through official Spectrum 26 channels. Participants must align their product to one of these verticals.

Day 1 — Build and Submit (June 8)

Participants build their product and prepare their submission package. By the submission deadline on Day 1, each participant or team must submit a working product alongside a document covering the following areas:

What the product does and the problem it solves, the core features and how they work, the vision for the product and where it can go, and how the product relates to the chosen challenge vertical.

Exact submission format and the platform where you submit will be communicated through the official participant WhatsApp group on the morning of Day 1. Proper guidance will be provided.

Submissions are reviewed overnight by an internal evaluation panel comprising faculty, senior students, and industry representatives. The panel's identities are not disclosed. Results are based entirely on the quality of the submission.

Finalist List Published

A select number of qualifying participants and teams are notified and invited to present on Day 2. The module management reserves the right to determine the exact number of finalists. Not all submissions will qualify. Non-finalists are notified as well.

Day 2 — Pitch to Judges (June 9)

Finalists present in front of an industry judge panel. Each slot runs for 10 minutes total.

5 minutes — live product demo and pitch

3 minutes — judge Q&A

2 minutes — transition

A live demo is mandatory. Slides are optional but the product must be shown running. A recorded video in place of a live demo will not be accepted.

Results and Awards Ceremony

Winners announced at the closing ceremony. All top three are invited on stage.

Judging Rubric

Problem and use case — 30%

Is the problem real and specific? Does the participant understand who suffers from it and why existing solutions fall short? A vague problem with no clear user is not a strong submission.

Product-market fit — 25%

Is there a believable market for this? Who would pay for it or use it regularly? Is the positioning clear and differentiated from what already exists?

Product and usability — 25%

Does the product work in the live demo? Is it intuitive? Could someone who did not build it understand and use it without help?

Scalability and business sense — 20%

Is there a coherent path to growth or revenue? Has the participant thought beyond the demo? Can they handle pushback on limitations and edge cases?

Pitch quality is not a standalone category. A participant who truly understands their product and market will naturally communicate it well and score higher across all four dimensions.

Prize Breakdown

1st place — Rs. 30,000

2nd place — Rs. 10,000

3rd place — Certificate and goodies, recognised on stage at the awards ceremony

Total prize pool: Rs. 40,000

Rules and Regulations

Solo, duo, and triplet participation is allowed.

All building must happen on Day 1 during official event hours. Products that were substantially built before the event are grounds for disqualification.

All tools are permitted — AI, no-code, automation platforms, LLM APIs, vibe coding tools, anything.

Participants must select one challenge vertical from the official list and align their submission to it.

A live product demo is mandatory on Day 2 for all finalists. Slides-only presentations are not accepted.

Teams may not share products, ideas, or submission documents with other registered participants.

Any violation results in disqualification with no refund.
